

**BROADCAST AUDIO
SOLUTIONS FOR EFP/ENG**

LONG SHOTGUN MICS

Broadcast quality long shotgun microphones are perfect for a wide range of Electronic Field Production (EFP) & Electronic News-gathering (ENG) applications - their high directionality and narrow pick-up pattern really help to capture distant sound, and enables the picking-out of specific sounds in a noisy environment.

Being so highly directional, these extended range long shotgun mics are particularly sensitive to wind noise (natural and induced). Rycote has a range of professional products for mounting long mics, and protecting them from the effects of wind and handling noise.
